

Logging into iBoss from home

- Log into your Chromebook.
- Connect to your wifi.
- Open up your web browser.
- You should see the screen below for just a few seconds. Then you will be redirected to the page you were trying to visit.

- If you do not see the above screen (or you see a 'page cannot be displayed' error), press the  button in your browser. You may need to repeat this step.
- After your computer has logged into iBoss, you will be redirected to the district homepage. (Note: If the iBoss login page takes a long time to load, be patient. There are 600+ students using the system. Outbound bandwidth is limited.)
- If you the web browser stays on the login page and does not automatically log you in, you may login manually using your Moodle username (your student ID) and password.
- You may now surf the web as usual.
